Fund commentary

The FTSE/JSE All Share Index (ALSI) returned 3.0% on a total return basis in April. The FTSE/JSE All Bond Index returned 1.4%. Cash returned 0.7%.

The NSX Overall Index returned 12.1% and the NSX Local Index returned 1.6% on a total return basis in April. Over a 12-month period the NSX Overall Index returned 13.5% versus 20.4% for the Local Index. The IJG All Bond Index returned 4.1% in April and 12.9% over 12 months. The IJG Money Market Index increased by 0.7% in April and by 8.4% over 12 months.

The Namibian dollar strengthened 0.8% against the US dollar, 1.8% against the euro and 1.7% against the pound sterling.

The fund realised a total return of 0.9% for the month. Contributing the most to absolute performance was the fund's exposure to SA and Namibian equities (excluding property) and Namibian bonds (excluding inflation-linked bonds). This brings the one-year performance of the fund to 8.2% (after fees).

The fund delivered a return of 8.4% per annum since inception (after fees) whilst the NCPI inflation index has increased by 5.1% per annum over the same period.

Glossary

income distributions over a rolling 12-month period, then dividing by the sum of the NAV at the end of the period and any capital distributed over the same period.Annualised performanceThe average amount of money (total return) earned by an investment each year over a given time period. For periods longer that year, total returns are expressed as compounded average returns on a yearly basis.Cumulative performance graph This illustrates how an initial investment of R100 or N\$100 (for example) placed into the Fund would change over time, taking on fees into account, with all distributions reinvested.Income distributionThe dividend income and/or interest income that is generated by the underlying Fund investments and that is periodically declar and distributed to investors in the Fund after all annual service fees.Information ratioMeasures the Fund's active return (Fund return in excess of the benchmark) divided by the amount of risk that the manager take relative to the benchmark. The higher the information ratio, the higher the active return of the Fund, given the amount of risk tak and the more consistent the manager. This is calculated over a 3-year period.Maximum drawdownThe largest drop in the Fund's cumulative total return form peak to trough over any period.Percentage of positive rolling 2 monthsThe percentage of months, since inception, that the Fund has shown a positive return over a rolling 12-month period.Sharpe ratioSharpe ratio is used to measure how well the return of an asset compensates the investor for the risk taken. The higher the sharpe ratio the better the Fund's historical risk-adjusted performance has been. This is calculated by taking the difference betw the Fund's networks how well the return of an asset compensates the investor for the risk taken. The high		
year, total returns are expressed as compounded average returns on a yearly basis. Income is the second provided average returns on a yearly basis. Cumulative performance graph This illustrates how an initial investment of R100 or N\$100 (for example) placed into the Fund would change over time, taking on fees into account, with all distributions reinvested. Income distribution The dividend income and/or interest income that is generated by the underlying Fund investments and that is periodically declar and distributed to investors in the Fund after all annual service fees. Information ratio Measures the Fund's active return (Fund return in excess of the benchmark) divided by the amount of risk that the manager take relative to the benchmark. The higher the active return of the Fund, given the amount of risk tak and the more consistent the manager. This is calculated over a 3-year period. Maximum drawdown The largest drop in the Fund's cumulative total return from peak to trough over any period. Monthly volatility (annualised) Also known as standard deviation. This measures the amount of variation or difference in the monthly returns on an investment. larger the annualised monthly volatility, the more the monthly returns are likely to vary from the average monthly return (i.e. the roviatile the investment). Percentage of positive rolling The percentage of months, since inception, that the Fund has shown a positive return over a rolling 12-month period. Sharpe ratio The Sharpe ratio is used to measure how well the return of an asset compensates the investor for the risk taken. The higher the inforence betwent the Fund's site acluul	12-month yield	A measure of the Fund's income distributions as a percentage of the Fund's net asset value (NAV). This is calculated by summing the income distributions over a rolling 12-month period, then dividing by the sum of the NAV at the end of the period and any capital gains distributed over the same period.
fees into account, with all distributions reinvested.Income distributionThe dividend income and/or interest income that is generated by the underlying Fund investments and that is periodically declar and distributed to investors in the Fund after all annual service fees.Information ratioMeasures the Fund's active return (Fund return in excess of the benchmark) divided by the amount of risk that the manager take relative to the benchmark. The higher the information ratio, the higher the active return of the Fund, given the amount of risk tak and the more consistent the manager. This is calculated over a 3-year period.Maximum drawdownThe largest drop in the Fund's cumulative total return from peak to trough over any period.Monthly volatility (annualised)Also known as standard deviation. This measures the amount of variation or difference in the monthly returns on an investment. larger the annualised monthly volatility, the more the monthly returns are likely to vary from the average monthly return (i.e. the m volatile the investment).Percentage of positive rollingThe percentage of months, since inception, that the Fund has shown a positive return over a rolling 12-month period.21 monthsThe Sharpe ratio is used to measure how well the return of an asset compensates the investor for the risk taken. The higher the Sharpe ratio the better the Fund's historical risk-adjusted performance has been. This is calculated by taking the difference between the Fund's annualised return and the risk-free (cash) rate, divided by the standard deviation of the Fund's returns. This is calculated over a 3-year period.Sortino ratioThis is calculated by taking the difference between the Fund's annualised return and the risk-free (cash) rate, divided by the dow deviation of the Fund's returns. Disclaimer

MandG Investments Unit Trusts (Namibia) Ltd (Registration number: 2007/609) is an approved Management Company in terms of the Unit Trusts Control Act, 1981.

approved Management Company in terms of the Unit Trusts Control Act, 1981. Unit trusts Control Act, 1981. Unit trusts Control Act, 1981. Unit trusts are generally medium- to longterm investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. A schedule of fees and charges and maximum commissions is available on request from the Management Company. Commission and incentives may be paid and if so, would be included in the overall costs. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Different classes of units may apply to the portfolio and are subject to different fees and charges. Unit prices are calculated on a net asset value (NAV) basis, which is the total value of all the ascets in the portfolio including any income accrual and less any permissible deductions from the portfolio divided by the number of units in issue. Fund valuations take place at approximately 14h30 Namibian time each day and forward pricing is used. Purchase and repurchase requests must be received by the manager by 13h30 (09h00 for the Money Market Fund) Namibian time each business day. In calculating performance figures initial charges are not taken into account. Annual service charges are deducted in all calculations. Performance figures suitial charges are not taken into account. Annual service charges are deducted in all calculations.

³ If the income earned in the form of dividends and interest exceeds the total expenses, the Fund will make a distribution (cpu = cents per unit).
