

M&G Global Equity Feeder Fund

Global Equity ZAR-denominated

Q3 2024

Market overview

The third quarter of 2024 (Q3) witnessed notable fluctuations in global financial markets, driven by diverse economic signals, a shift among major central banks toward easing monetary policies and geopolitical tension. In mid-September, the US Federal Reserve (Fed) implemented a sizable interest rate cut of 50 basis points, lowering the target range to 4.75%-5.00%. This shift propelled global equity markets to new heights, while weakening the US dollar to major currencies.

Equity markets continued to perform well in the third quarter. Global equities (as measured by the MSCI All Country World Index) recorded a total return of 6.6% in Q3 compared to 2.9% in Q2, while emerging market equities (MSCI Emerging Markets Index) rallied another 8.7% in Q3 from 5.0% in Q2 (all in US\$).

United States

In the US, investor sentiment toward equities cooled slightly in anticipation of the Federal Reserve's rate decision. While the much-anticipated rate cut was no surprise, the Fed did, however, surprise markets by cutting rates by a sizable 50 basis points in September, marking the start of its first easing campaign in four years. This significant cut reflected signs of moderating inflation and a weakening labour market. The focus has shifted towards the quantum of future rate cuts before the market will get too worried about a possible US recession. Comments from Fed chair Powell also helped ease any market concerns as it suggested future rate cuts should be more muted depending on economic data and inflation reporting.

August's CPI came in at 2.5% y/y, aligned with expectations and down from 2.9% in July, while the core PCE price index, the Fed's preferred inflation measure, rose to 2.7% y/y. Q2 GDP exceeded expectations at 3% (q/q annualised), largely driven by consumer spending, while the downwardly revised Q1 GDP stood at 1.3%. The Fed maintained its growth forecast for 2024 at 2.1%. During the quarter, the Dow Jones gained 8.7%, the Nasdaq increased by 2.8%, and the S&P 500 rose by 5.9% (all in US\$).

United Kingdom

In the UK, the Bank of England (BOE) kept its main interest rate steady at 5% during its September meeting, following a reduction from 5.25% to 5% in August. UK CPI held steady at 2.2% y/y in August, aligning with expectations as the BOE aims to return inflation to its 2% target.

UK GDP grew by 0.7% in Q2 2024, slightly below expectations, following 0.3% y/y growth in Q1, with underlying growth showing weakness in the first half of the year. In the UK National Election on 4 July, the Labour Party achieved a decisive victory, unseating the Conservatives after 14 years. Pre-election uncertainty caused some volatility, but the outcome was anticipated in the local financial markets. In Q3 2024, the FTSE 100 Index returned 8% (in US\$).

Euro area

In the Euro area, the European Central Bank (ECB) lowered its main refinancing rate to 3.65% during its September meeting, as anticipated. August CPI was reported at 2.2% y/y, down from 2.6% in July and, aligning with the consensus, with the preliminary September number printing at 1.8%, below the ECB's 2.0% target.

Q2 2024 GDP growth surpassed expectations at 0.6% y/y but was revised down to 0.2% q/q, compared to 0.3% in Q1. France's CAC 40 rebounded with a 6.5% return in Q3 after a 7.3% decline in Q2, while Germany's DAX delivered a strong 10.4% return for Q3 (both in USD).

Japan

The Bank of Japan (BOJ) unexpectedly raised rates by 15 basis points from 0-0.1% to 0.25% on the last day of July, the highest level since 2008, and signaling a more hawkish stance than anticipated. This decision led to significant volatility in local equities and high-carry currencies, with the Nikkei 225 Index experiencing a sharp decline in early August but recovering by month-end. After a strong return of 13.2% in Q1, the Nikkei retraced some gains in Q2 with a -7.6% return, followed by a 8.5% USD gain in Q3.

Japan's August core CPI rose to 2.8% y/y, aligning with forecasts and accelerating for the fourth consecutive month. In a widely anticipated move, the BOJ maintained its benchmark interest rate at 0.25% at its September meeting, in its efforts to normalise monetary policy. The BOJ's decision came as it seeks to transition away from a long-standing ultra-easy monetary stance while safeguarding the economy. Japan's economy grew at an annualised rate of 2.9% in the second quarter, surpassing the projected 2.1%.

China

China's economy is showing signs of a modest recovery, but a slow start to the second half of the year is increasing pressure on the world's second-largest economy to implement additional stimulus policies. This came amid ongoing challenges, including a prolonged housing downturn, persistent deflation, rising debt issues, and escalating trade tensions.

The People's Bank of China (PBOC) announced broad policy easing measures to shore up a flailing economy. The central bank cut the rate on one-year medium-term lending facility (MLF) loans to some financial institutions to 2% from 2.3%. Additionally, the reserve requirement rate was reduced from 10% to 9.5%. Some questions around the Chinese economy remains, such as the health of their property market and the impact these changes will have on the recovery in that sector, but the market clearly thinks the initial actions were positive.

China's August CPI increased to 0.6% y/y from 0.5% in July

Risk profile

Fund facts

Fund objective

To provide investors with capital growth over the long-term by investing in a diversified portfolio of global equity securities.

Investor profile

Investors seeking long-term capital growth from global equity securities. The recommended investment horizon is 7 years or longer. Although the Fund's investment universe is global, units are priced in rands. Investors can therefore invest without having to personally expatriate rands.

Investment mandate

The Fund is a feeder fund and, other than assets in liquid form and currency contracts, invests only in one underlying fund – the M&G Global Equity Fund. Quantitative analysis of individual companies, proprietary data analysis and machine learning are used to identify securities for potential inclusion by the fund managers. The Fund has exposure to a diversified portfolio that may include common stocks and shares, depository receipts, REITs, other collective investment schemes and financial derivative instruments.

Investment manager of the underlying fund

Annualised performance

	A class	Benchmark	B class
1 year	15.8%	20.5%	16.2%
3 years	10.2%	13.1%	10.6%
5 years	13.9%	15.1%	14.3%
7 years	12.0%	14.1%	-
10 years	12.2%	14.1%	-
20 years	11.3%	13.8%	-
Since inception	8.5%	10.0%	-

but came in lower than the forecasted 0.7%. The uptick was mainly due to higher food costs from weather disruptions, rather than a recovery in domestic demand as producer price deflation worsened.

After years of stagnation, Chinese stocks surged in September, marking a significant turnaround from earlier in the quarter. The rally was driven by the government's aggressive stimulus plan, which included rate cuts and support for the struggling real estate sector. Hong Kong's Hang Seng Index returned 22.3% and the MSCI China Index rose 23.6% in Q3 2024 (both in US\$).

Emerging markets

The MSCI Emerging Markets Index achieved a robust 8.9% return, primarily fuelled by gains in China and South Africa. The MSCI China Index ended the quarter as one of the top performers, surging 23.6%, while South Africa and India benefitted from positive sentiment following their market-friendly national elections, returning 16.3% and 7.4%, respectively (both in USD). Conversely, the MSCI Turkey Index fell from its position as the previous quarter's top-performer, ending the period down 12.5%. Brazil's Bovespa gained 8.5%, while South Korea's KOSPI declined by 2.2% (all in US\$).

Currency

The Rand strengthened to the end of September to the best levels since the start of 2023 having gained 5.6% against the US dollar and 1.7% against the Euro, but it depreciated 0.1% against the Pound Sterling.

Performance

The M&G Global Equity Feeder Fund produced a return of 1.2% (A class, net of fees in Rand) for the quarter, versus the 0.6% recorded by its benchmark. For the 12 months to 30 September, the fund delivered 15.8% compared to the benchmark's 20.5% return.

Absolute performance was driven by gains in equity markets in the quarter.

The portfolio outperformed on 26 out of 66 trading days during the quarter, offering an unfavourable hit rate of around 39%. The poor hit rate was offset by a favourable skew, as average outperformance was larger than average underperformance over the period.

A key attribute of portfolio construction within the fund is that active country, currency and industry exposures are constrained to ensure that style and idiosyncratic stock risk are the main drivers of active returns.

The portfolio's style exposure provided a modest tailwind over the quarter, with exposure to high beta and smaller size factors, more than compensating for a modest drag from the portfolio's high residual volatility exposure.

Stock selection had a modest negative impact over the quarter.

Strategy & positioning

The portion of the fund managed using its proprietary machine learning model is approximately 90%, with the balance of approximately 10% remaining in strategic ETFs. The ETF allocation is primarily used for liquidity purposes.

Outlook

Looking forward, it seems there will be plenty to occupy investors in the final quarter of the year. With no US Federal Reserve meeting in October, investors will no doubt be carefully digesting upcoming employment and inflation data, as well as any remarks from policymakers, for clues on the future path of interest rates.

The US third-quarter earnings season will need to be sufficiently upbeat to support the recent strength in US equities. Finally, with no clear favourite between the two candidates in the upcoming US presidential election, we are reminded about how surprising market reactions can be to election outcomes.

Overall equity valuations look demanding in aggregate (most notably in the US), although not detached from recent robust earnings/fundamentals. □

Disclaimer

MandG Investments Unit Trusts (South Africa) (RF) Ltd (Registration number: 1999/0524/06) is an approved CISA management company (#29). Assets are managed by MandG Investment Managers (Pty) Ltd, which is an approved discretionary Financial Services Provider (#45199). The Trustee's/Custodian details are: Standard Bank of South Africa limited – Trustees Services & investor Services, 20th Floor, Main Tower, Standard Bank Centre, Heerengracht, Cape Town.

Collective Investment Schemes (unit trusts) are generally medium- to long-term investments. Past performance is not necessarily a guide to future investment performance. Unit trust prices are calculated on a net asset value basis. This means the price is the total net market value of all assets of the unit trust fund divided by the total number of units of the fund. Any market movements – for example in share prices, bond prices, money market prices or currency fluctuations – relevant to the underlying assets of the fund may cause the value of the underlying assets to go up or down. As a result, the price of your units may go up or down. Unit trusts are traded at the ruling forward price of the day, meaning that transactions are processed during the day before you or the Manager know what the price at the end of the day will be. The price and therefore the number of units involved in the transaction are only known on the following day. The unit trust fund may borrow up to 10% of the fund value, and it may also lend any scrip (proof of ownership of an investment instrument) that it holds to earn additional income. A M&G unit trust fund may consist of different fund classes that are subject to different fees and charges. Where applicable, the Manager will pay your financial adviser an agreed standard ongoing adviser fee, which is included in the overall costs of the fund. A unit trust summary with all fees and maximum initial and ongoing adviser fees is available on our website. One can also obtain additional information on M&G products on the M&G website. The Fund may hold foreign securities including foreign CIS funds. As a result, the fund may face material risks. The volatility of the fund may be higher and the liquidity of the underlying securities may be restricted due to relative market sizes and market conditions. The fund's ability to settle securities and to repatriate investment income, capital or the proceeds of sales of securities may be adversely affected for multiple reasons including market conditions, macro-economic and political circumstances. Further, the return on the security may be affected (positively or negatively) by the difference in tax regimes between the domestic and foreign tax jurisdictions. The availability of market information and information on any underlying sub-funds may be delayed. The Manager may, at its discretion, close your chosen unit trust fund to new investors and additional investments by existing investors to make sure that it is managed in accordance with its mandate. It may also stop your existing debit order investment. The Manager makes no guarantees as to the capital invested in the fund or the returns of the fund. Excessive withdrawals from the fund may place the fund under liquidity pressure and, in certain circumstances, a process of ring-fencing withdrawal instructions may be followed. Fund prices are published daily on the M&G website. These are also available upon request. The performance is calculated for the portfolio. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Purchase and repurchase requests must be received by the Manager by 13h30 (11h30 for the Money Market Fund) SA time each business day. All online purchase and repurchase transactions must be received by the Manager by 10h30 (for all Funds) SA time each business day.
